

AAEON Corporate Environmental Policy

AAEON is dedicated to the development, manufacturing, and sale of technological products such as main boards, systems, and computing platforms in life automation. AAEON also pursues its social responsibility as a global citizen concerning environmental preservation and the beauty of life; and contributes maximum effort towards environmental improvement.

Hereby, AAEON has decided to implement an environmental management system for this purpose; not only in accordance with the related international standards and requirements, but also with the spirit of continuous improvement and pollution prevention to achieve and maintain defined environmental objectives. AAEON therefore adopts the following environmental management guiding policy to be taken as our principles of conduct for environmental improvement:

1. As an element of service activities in design and manufacturing, we commit to decrease and prevent the possibility of generating pollution by adopting the concept of **3R (Reuse, Recycle, Reduce)**.
2. Setup environmental projects under management; take initiatives on energy conservation; and reduce the waste of resources.
3. With integrity and solid operating vision, all activities should meet government standards and other requests concerning environmental aspects in business contracts.
4. To educate, teach and propagate related knowledge on environmental protection and activities. (This includes all persons working for or on behalf of the organization to ensure our entire personnel get involved to maintain its persistence.)
5. To let everyone know internally and externally to the company our environmental improvement activities and to maintain relevant communication with external interested parties.

Environmental Declaration : Public Satisfaction, **Environment Supremacy**
